TS – Node – React Interview
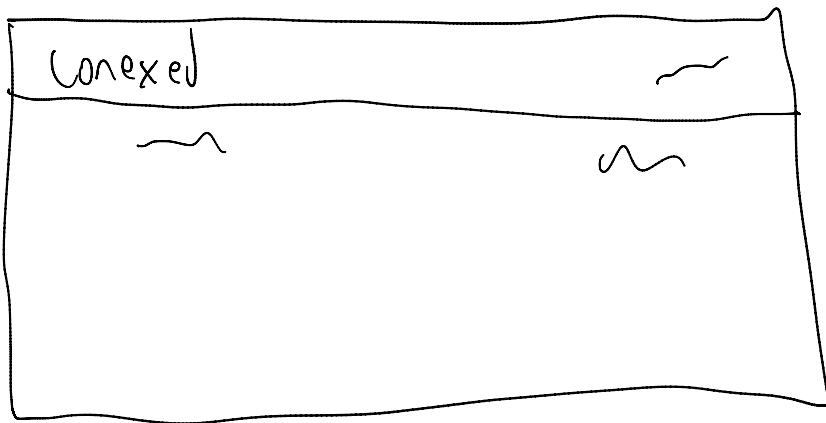

Hello!!

this Project will test
your ability to work with

Currently you will
see this when you run
The Proj

↓

Conexed

↓

Your task is to turn
this Project into a mini
interaction between

interaction between

React & Node
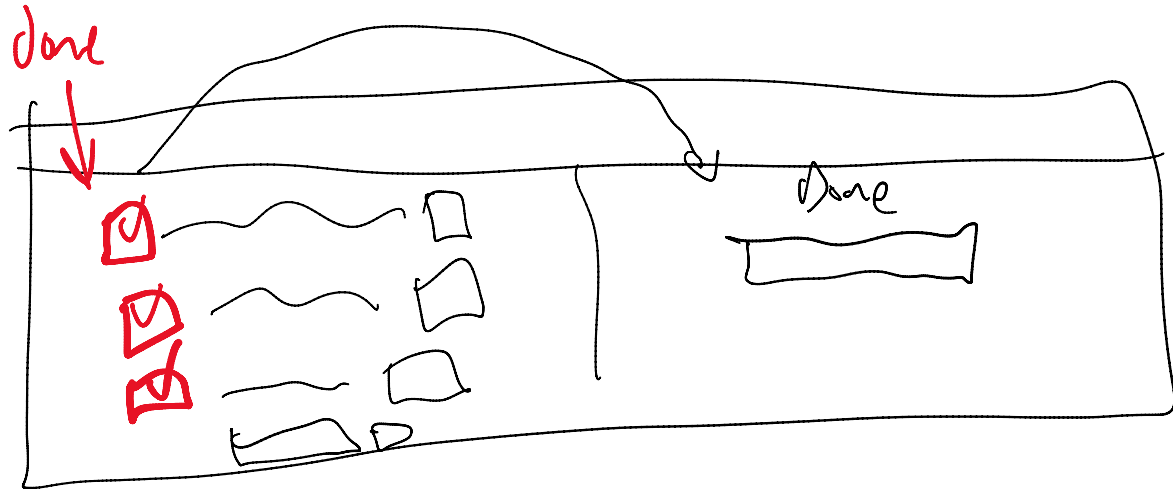

1) On the backend store
   a default list of values

2) request & show the
   values on the left
   menu

Here

delete

input   add to list

3) allow creation of new
   values & delete

4) Create a way to mark items as done,

This will move them to the right hand list

5) You can make the ui better for bonus points... but you dont have to

Notes:
- write code as clean as possible

- Write code as clean as possible

- Makee sure that all items
  stay in the correct list
  on Refresh... (store on server
                in a fake db)
